ALEX ANTONY

Software Engineer | Python Developer | AI/ML Engineer | Full-Stack Developer

Changanacherry, Kerala | +91 6282775625 | alexantony013@gmail.com | GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

MCA graduate and aspiring Software Engineer with strong Python programming skills and hands-on experience building production-ready AI and full-stack applications. Developed an AI-powered Voice Interview Coach (LangChain + FastAPI + React), a YOLOv8-based real-time traffic management system, and a Django-based service management platform. Skilled in software development lifecycle (SDLC), object-oriented programming (OOP), RESTful API design, data structures and algorithms (DSA), and full-stack web development. Strong mathematical foundation (B.Sc. Mathematics) supporting algorithmic thinking and problem solving. Actively solving DSA problems on LeetCode. Seeking a Software Engineer role to contribute to scalable, high-quality software products.

TECHNICAL SKILLS

Programming Languages: Python (primary), JavaScript, TypeScript, Java, C++

Software Development: Object-Oriented Programming (OOP), REST API Design, SDLC, Agile, Unit Testing, Integration Testing, System Testing, Version Control (Git)

Web & Backend Frameworks: FastAPI, Django, Flask, React.js, React Native, HTML, CSS, Bootstrap

AI / ML & GenAI: LangChain, Groq API, Prompt Engineering, YOLOv8 (PyTorch), scikit-learn, NumPy, Pandas, Matplotlib, OpenCV

Databases: MySQL, SQLite, Relational Database Design

Tools & Platforms: Git, GitHub, Linux, Docker (basic), VS Code, Postman

Core Concepts: Data Structures & Algorithms (DSA), Problem Solving, System Design (basics), Statistics, Probability, Linear Algebra

EDUCATION

Master of Computer Applications (MCA) | College of Engineering, Chengannur – APJ Abdul Kalam Technological University | 2024 – 2026 | CGPA: 8.26

Bachelor of Science in Mathematics | SB College, Changanacherry – Mahatma Gandhi University | 2020 – 2024 | CGPA: 7.0

PROJECTS

AI Interview Coach | Jun 2026 | GitHub

- Built a full-stack AI-powered voice interview simulator using Python, LangChain, Groq LLM (LLaMA 3.3 70B), FastAPI, and React.js — simulating real interview experience with voice-to-voice interaction.
- Implemented continuous speech recognition (Web Speech API) with manual End Answer control — preventing auto-cutoff during natural pauses, replicating realistic interview conditions.
- Designed RESTful API endpoints using FastAPI for dynamic question generation across Technical, HR, and Mixed interview modes with Easy/Medium/Hard difficulty levels.
- Built resume-based personalized question generation — AI analyzes uploaded PDF resume and generates questions specific to candidate's projects, skills, and experience.
- Developed automated answer scoring (0–10) with structured feedback covering strengths, improvement areas, and better answer suggestions; session progress tracking with visual analytics.

Tech Stack: Python, LangChain, Groq API, FastAPI, React.js, Web Speech API, REST API

Smart Traffic Management System | Mar 2026 | MCA Final Year Project | GitHub

- Designed and implemented a real-time vehicle detection and classification system using YOLOv8 deep learning model, processing live video streams with 90%+ detection accuracy.
- Built complete data preprocessing pipeline using OpenCV — frame extraction, resizing, normalization, and enhancement for varying lighting and traffic conditions.
- Developed RESTful backend using Flask with model inference and video streaming endpoints; built React.js dashboard for live monitoring and visualization.
- Implemented adaptive traffic signal control algorithm (RED/YELLOW/GREEN phases) driven by real-time vehicle density estimation, reducing manual intervention.

- Conducted comprehensive testing (unit, integration, system) and evaluated model using Precision, Recall, F1-score, and mAP metrics.

Tech Stack: Python, YOLOv8 (PyTorch), OpenCV, Flask, React.js, NumPy, Pandas

GameHub – Mobile Game Discovery App | 2026 | GitHub

- Built a cross-platform mobile application using React Native (Expo) with TypeScript targeting both Android and iOS from a single codebase.
- Implemented file-based routing using Expo Router and structured project layout following mobile development best practices.

Tech Stack: React Native, Expo, TypeScript, JavaScript, Expo Router

Autocare – Vehicle Service Management System | 2025 | GitHub

- Developed a multi-role web application (Customer, Mechanic, Manager, Admin) with complete authentication, authorization, and role-based access control (RBAC) using Django.
- Designed normalized relational database schema in MySQL; implemented MVC architecture with modular code structure following software engineering best practices.

Tech Stack: Django, MySQL, Bootstrap, Python

CERTIFICATIONS

- SWAYAM (NPTEL) – Cloud Computing

ACTIVITIES & INTERESTS

- Actively solving DSA problems on LeetCode covering arrays, strings, trees, graphs, and dynamic programming — focused on technical interview preparation.
- Participating in open-source contributions and personal AI projects to stay current with LLM and GenAI developments.
